PROFILE

I am always eager to develop and deploy my skills and grow professionally. And I am confident in my ability to, from data, identify patterns, extract useful insights and make predictions using machine learning. My end goal is to help make better informed, data-driven decisions.

EXPERIENCE

• Grocery Store Chain Expansion Project:

I used multiple analytical techniques to provide recommendations on where and how to expand for a grocery store chain planning a significant expansion.

• Employee Fraud Detection Project:

Using machine learning, I built an algorithm to identify Enron Employees who may have committed fraud based on the public Enron financial and email dataset.
